About Us.

Onesh Agri (Pvt) Ltd. which was established in 1986, is a leading agriculture, horticulture, and floriculture company in Sri Lanka, specializing in plant breeding, seed production, and the import and distribution of high-quality vegetable seeds under our brand, “Onesh.” With a strong global network, we provide farmers with top-tier seeds and innovative agricultural solutions.

Since inception, we have embraced modern agricultural technologies, including protected cultivation, polytunnels, drip irrigation, and fertigation, making us pioneers in ensuring the quality of Sri Lanka’s greenhouse and irrigation sector. As the authorized dealer for industry leaders like Netafim and Plastika Kritis, we offer advanced irrigation systems and greenhouse solutions tailored to local conditions.

Beyond supplying agricultural inputs, we are a hands-on farming company cultivating unique fresh produce while conducting cutting-edge R&D in plant breeding and sustainable farming. Our ongoing breeding programs, which are done in close collaboration with [WorldVeg](#), aim to enhance local crop varieties, reinforcing our commitment to innovation and agricultural excellence.

Mission & Vision.

VISION

To be Sri Lanka's most trusted and preferred supplier of high-quality seeds, drip irrigation systems, and sustainable agricultural inputs—enhancing farmers' livelihoods, promoting environmentally responsible practices, and consistently exceeding customer expectations through innovation, reliability, and global partnerships.

MISSION

- To be the leader in the Seed Industry in Sri Lanka by producing and supplying the best value seeds and irrigation systems to our farmers.
- Build long-term faith with our customers.
- Elevate agricultural productivity and profitability for farmers nationwide.
- Stay at the forefront of agricultural technology through research and innovation.
- Offer integrated services across seed production, irrigation, greenhouse systems, and expert consultations.
- Build enduring partnerships, both locally and internationally.

Core Competencies.

Seed Production & Plant Breeding

- Onesh Agri conducts research and development both in-house as well as through international collaborations, focused on enriching local vegetable varieties through rigorous breeding programs.

Advanced Irrigation & Protected Cultivation

- By leveraging technologies such as drip irrigation, fertigation, and polytunnels, the company enhances crop protection and increases yields in controlled environments.

Global Partnerships

- As the authorized dealer for Netafim and Plastika Kritis, Onesh Agri delivers advanced irrigation solutions and greenhouse infrastructure to farmers across Sri Lanka.

The Organization.

Mr. Nimal Jayantha

Head of Agriculture Technology

Products and Services.

Products

- Vegetable Seeds – Locally bred and imported varieties tailored to Sri Lankan growing conditions.
- Fruit Seeds and Field Crops – Specialized seeds for tropical conditions.
- Irrigation Items – High-efficiency irrigation components and systems.
- Greenhouse Technology – Infrastructure and accessories for controlled-pollination and protected cultivation environments. (Netting, mulching, ground covers and other polythene products)

Services

- Consultations – Agronomic support, project planning, and technical guidance.
- Project Implementation – Design and execution of irrigation and greenhouse installations—from planning to commissioning.

Research and Development.

At Onesh Agri, we believe that innovation is the backbone of sustainable agriculture. That is why research and development (R&D) is at the heart of everything we do. We operate multiple dedicated farms across diverse agro-ecological zones in Sri Lanka, which serve as living laboratories where we test, refine, and validate modern farming techniques.

R&D Focus Areas	Description
Breeding Programs	Pioneering unique breeding programs to develop resilient, high-yielding crop varieties, supported by a diverse range of genetics sourced from around the world.
Seed Production	Producing high-quality seeds to meet international standards and also tailored to the needs of Sri Lankan farmers.
Protected Cultivation	Testing advance technology; drip irrigation, fertigation, and high tunnels before introducing them to the wider market.
Sustainability	Eco-friendly farming practices to conserve resources.
